

1 Description

Now is a chance for you to demonstrate your XHTML prowess. For this assignment you are to create an XHTML page that passes the validator at <http://validator.w3.org>. Your web page should not contain any CSS or Javascript in it since they will be added in later assignments. The web page must pass the XHTML 1.1 standards validator without any error messages.

Don't worry too much about appearance because that will be taken care of when you add the CSS and Javascript into this page. For now, concentrate on the content.

2 Constraints

You are to have at least fifteen unique tags within the page (used properly). The content may be whatever you wish; my recommendation is to make it useful for your final project (i.e., online football stats system). There must be at least one hyperlink to another existing page.

3 Grading

This assignment will count 5% toward your assignment grades. It will be graded as follows:

- 100 points for the entire page
 - 20 points for validation
 - 5 points for each tag
 - 5 points for turning in the assignment

4 Extra Credit

The student(s) with the most number of unique tags will receive a 3% bonus on this assignment.
